

# How to install your above-ground winter cover

1

## Prepare the pool cover

Lay out the cover on the ground. Thread the cable through the grommets (or loops).

2

## Set up the winch

Insert one cable through the hole at one end of the winch and into the center spindle. Turn the spindle a few times to secure the cable. Insert the other cable end through the other hole on the winch and pull the cable through the spindle. Turn the winch handle to tighten the cable.

3

## Secure the cover over the pool

Lay the cover over the pool, pulling the end of the cover over the pool wall. Ensure the cover fits snugly against the wall. Tighten the winch.

4

## Adjust and finalize the cover placement

Make sure the cover is flush to the walls and flat on the water surface as seen in the diagram below.

By following these steps and using the recommended products like the **Dazzle Closing Kit**, **GIZMO**, and water bags, which are available at Taunton Pools in Oshawa, you'll be able to protect your pool from harsh winter conditions and ensure an easier opening in the spring.

These instructions apply to most standard above-ground pools. Your pool may have additional or fewer steps required for proper winterization. Taunton Pools is not responsible for your pool closing.
