

How to install your in-ground winter cover

1

Lower the water level

Make sure the water level is below the skimmer and jets before installing the winter cover.

3

Secure with water bags

Lay water bags directly on the outer perimeter of the cover, ensuring they fully surround the pool to prevent wind from lifting the cover.

2

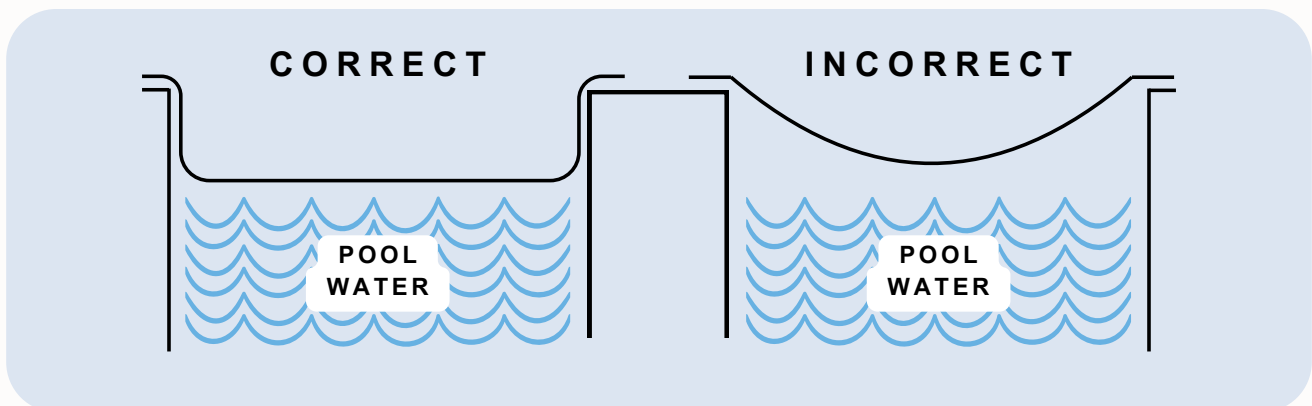

Place the cover

Spread the cover evenly over the pool.

4

Fill water bags

Fill the water bags only 70% to allow for ice expansion during winter.

By following these steps and using the recommended products like the **Dazzle Closing Kit**, **GIZZMO**, and water bags, which are available at Taunton Pools in Oshawa, you'll be able to protect your pool from harsh winter conditions and ensure an easier opening in the spring.

These instructions apply to most standard in-ground pools. Your pool may have additional or fewer steps required for proper winterization. Taunton Pools is not responsible for your pool closing.
